

End Field Burning Now!

To Governor Kulongoski and Oregon's Legislative Leadership

We, the undersigned, request that you put an immediate end to the practice of field burning in Oregon.

The medical evidence is overwhelming – fine particulates contained in the smoke from burning fields constitute a significant danger to public health. That smoke, in addition, may contain pesticide residues and other toxic chemicals. The smoke infiltrates our common airshed, penetrates deep into the lungs, and causes both acute and long-term health problems for persons with pre-existing lung and heart disease, the elderly, young children and others.
